ASSIGNMENT OF SAP EC AND TIME OFF

Phase 1

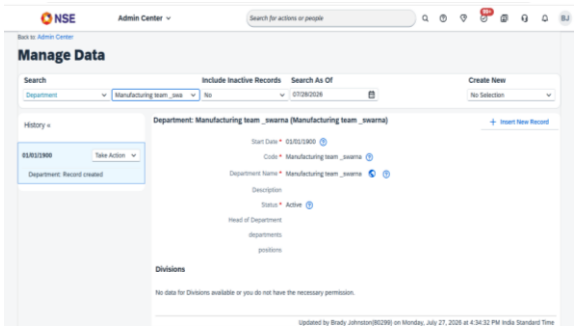

Legal Entity Creation

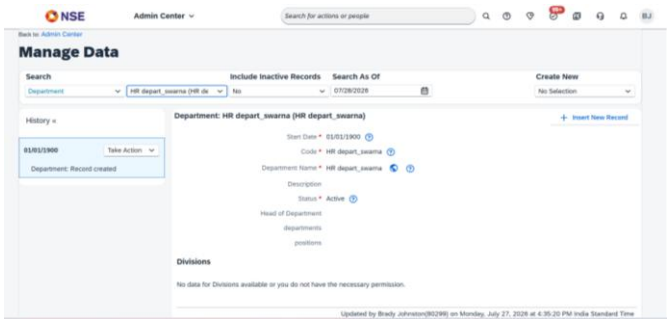

Business Ut Creation

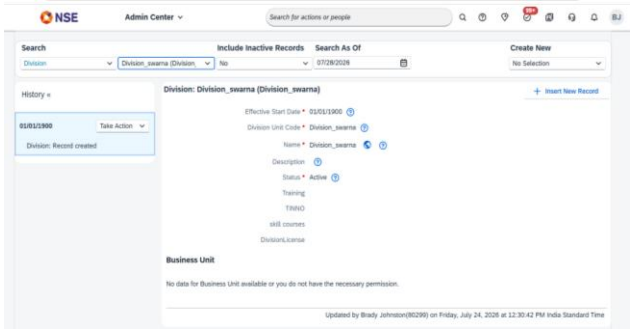

Department 1

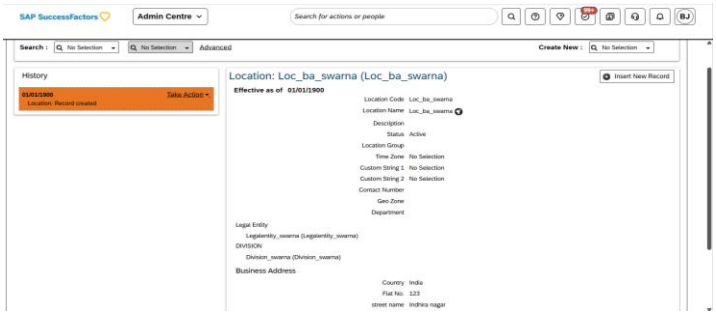

Department 2

Division

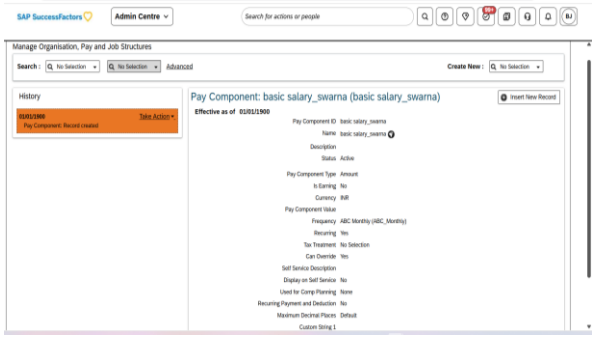

Location Creation

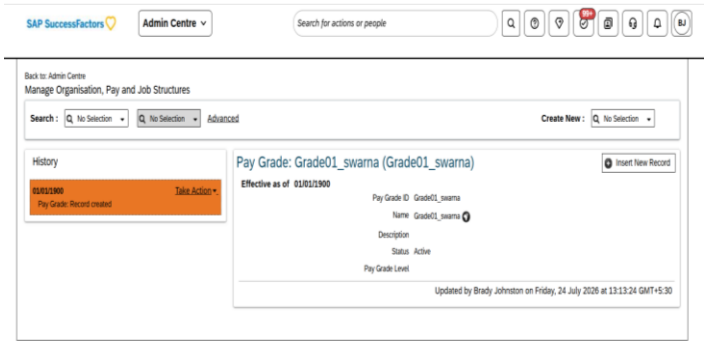

Costcenter

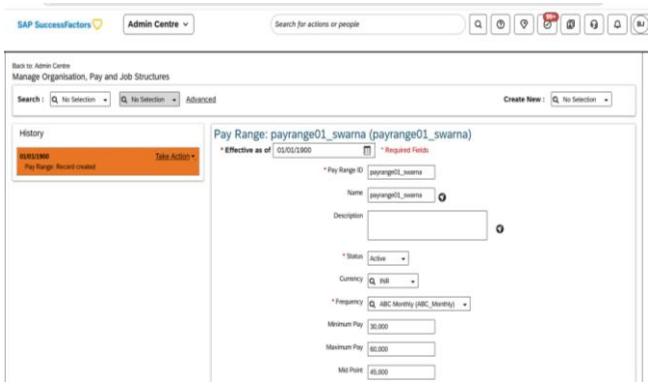

Pay Component

Pay Grade Creation

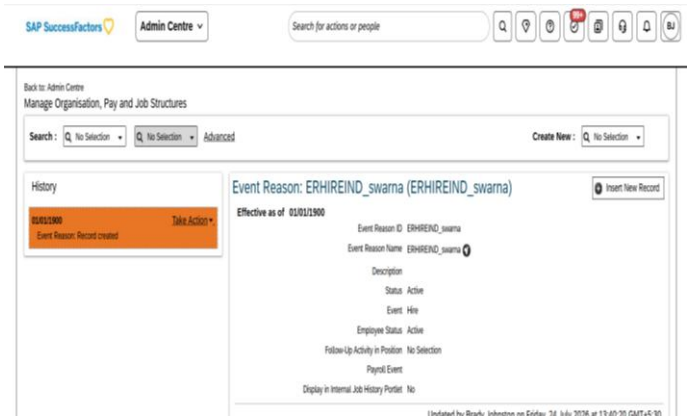

Payrange

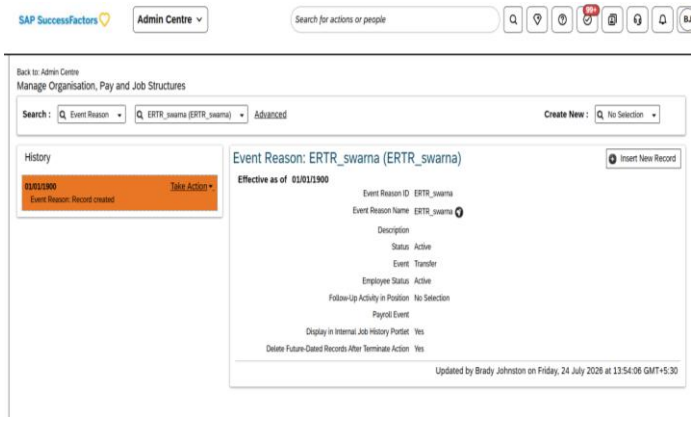

Job classification

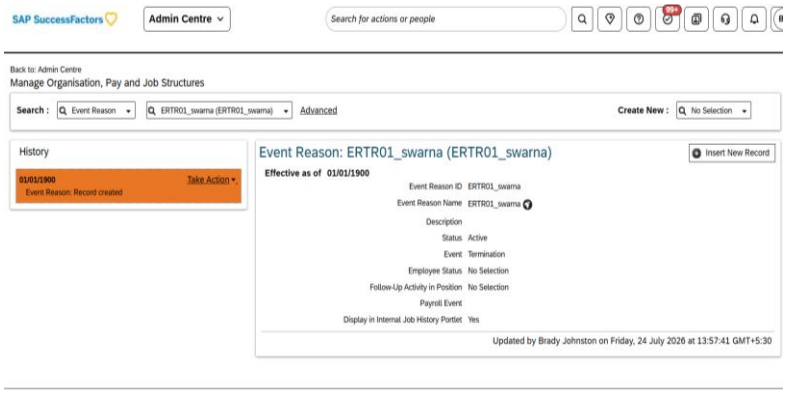

Event Reason- Hire

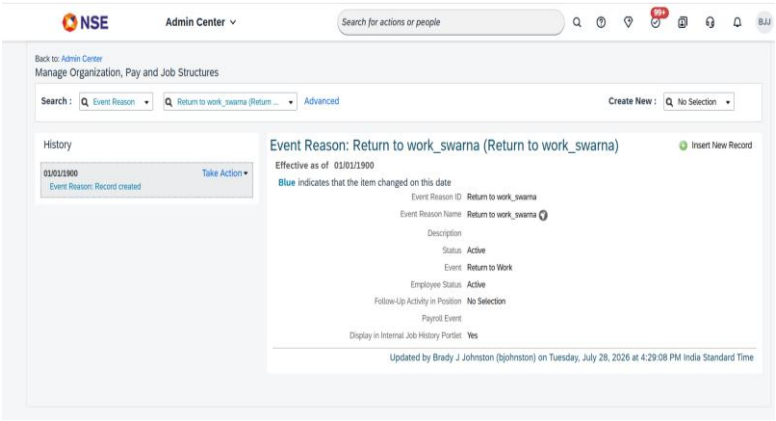

Transfer event

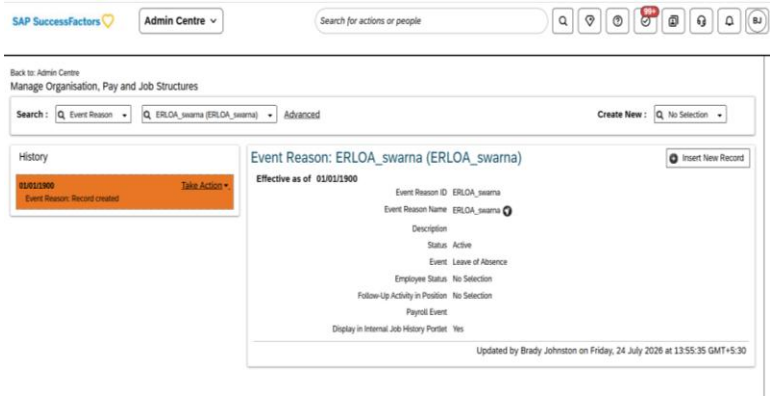

Termination

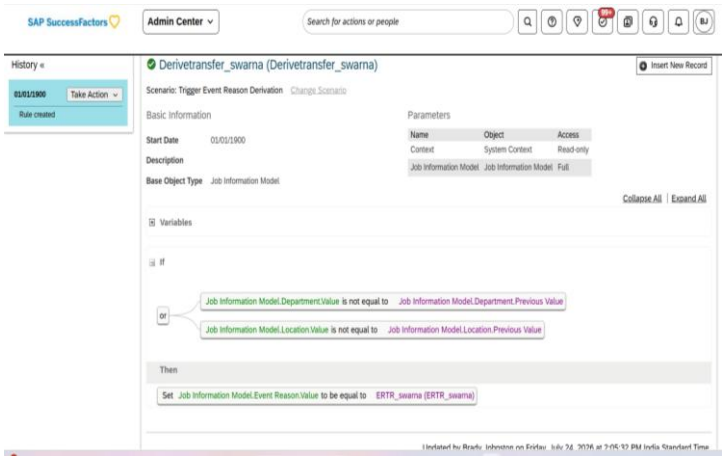

Event Reason for Return to Work

Leave of Absence

Business Rule for transfer

Phase 2 - Hire the Population

Detailed Steps

Step 1: Identity & Personal Information

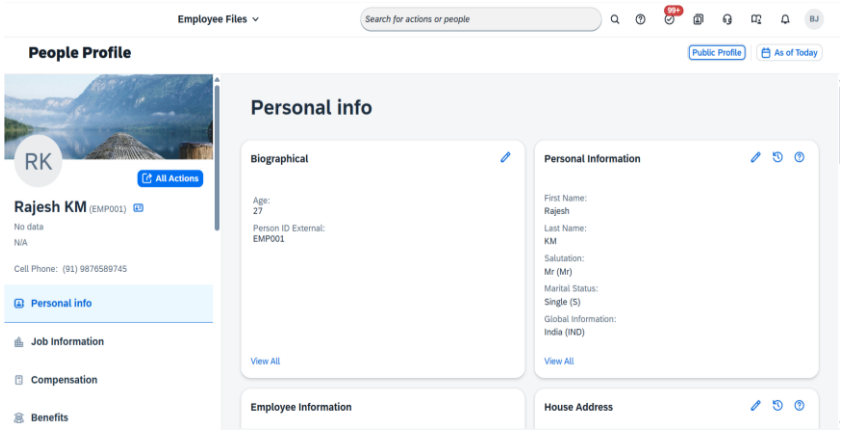

1. Open **Add New Employee**.
2. **Identity Information:** Enter **Hire Date**, **Company / Legal Entity**, and **Event Reason** (Hire or New Hire).
3. **Personal Information:** Enter *First Name*, *Last Name*, *Date of Birth*, and *Gender*.
4. **National ID / Person ID:** Set or auto-generate the Person ID (e.g., EMP001). Click **Continue**.

Step 2: Contact Details & Address

1. Enter **Primary Email** and **Phone Number**.
2. Add **Home Address** (ensure country matches legal entity). Click **Continue**.

Step 3: Job Information Assignment

1. **Position (if applicable):** Select an open position or proceed directly to organizational assignment.
2. **Organizational Information:**
    - **Location:** Select HQ - New York or Regional - Chicago.
    - **Department:** Select Sales or Human Resources.
    - **Division / Business Unit:** Select corresponding parent entity.
3. **Job Information:**
    - **Job Classification / Code:** e.g., *Sales Executive* or *HR Specialist*.
    - **Employee Class / Employment Type:** Select **Permanent** or **Fixed-Term / Temporary**.
    - **Contract End Date:** Required for *Fixed-Term* contracts.
4. **Work Schedule Assignment:**
    - In **Time Information** block, locate **Work Schedule**.
    - Select **Standard 9-to-5 Office** for EMP001, EMP002, EMP005, EMP006.
    - Select **Rotating Shift (24/7 or 2-Shift)** for EMP003, EMP004.
5. Click **Continue**.

Step 4: Compensation Information Assignment

1. **Pay Group & Currency:** Select corresponding Pay Group (e.g., *US Monthly*) and Currency (*USD*).
2. **Base Pay Component:**
    - Click **Add Pay Component**.
    - Select Base Salary or Hourly Rate.
    - Enter Amount (e.g., $75,000 / Year).
3. **Direct Deposit / Payment Information:** Enter bank details if required by system rule. Click **Continue**.

Step 5: Review & Save

1. Review all fields on the summary screen.
2. Click **Submit / Save** to finalize the hire.
3. **Repeat Steps 1–5** for all remaining employees in the execution matrix.

Process One Transfer (Department or Location Change)

Detailed Steps

 Select Effective Date: Choose effective date (e.g., 1 week after hire date).

 Select What to Change: Check the box for Job Information.

Event & Event Reason:

- Event: Transfer
- Event Reason: Location Change or Department Transfer

 Make Changes:

- Location: Change from HQ - New York → Regional - Chicago.

- Department: *(Optional)* Change from Sales → HR.

 Verify Derivation Rules:

- *Check:* Does changing Location automatically derive a new Holiday Calendar, Time Zone, or Pay Group?
- *Check:* Does changing Department update the Cost Center field automatically?

 Click Save (and approve workflow if triggered).

Process One Termination:

Detailed Steps

1. **Termination Details:**
    - Termination Date: Select last working day (e.g., end of Week 2).
    - Termination Reason: Select End of Contract or Voluntary Resignation.
    - Ok for Rehire: Select Yes.
2. **Direct Reports & Position Management (if applicable):**
    - If the employee has direct reports, assign a new manager.
    - Choose whether to Deactivate Position or keep position open for recruitment.
3. **Verify Derivation Rules:**
    - *Check:* Does setting the termination date set Employment Status to Terminated/Inactive on the termination date?
    - *Check:* Is compensation recurring pay components automatically delimited as of the termination date?
4. **Click Save to process.**

Validate Derivation Rules:

After executing Hires, Transfer, and Termination, run validation checks to confirm your Business Rules / Derivation Rules are functioning as designed:

Validation Checklist

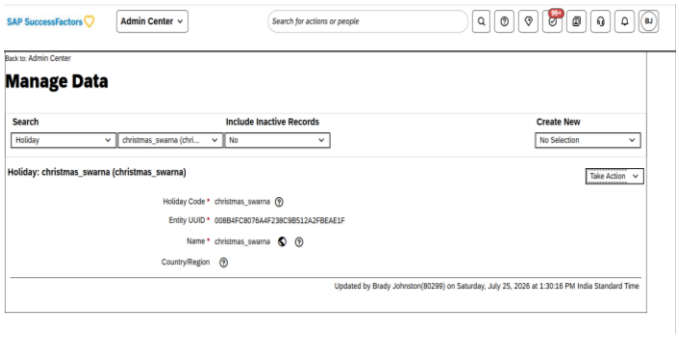

- **Work Schedule / Time Zone Rule:** Check if changing Location auto-derived the correct Work Schedule or Time Zone.
- **Cost Center Rule**: Confirm that Department assignment auto-populated the correct Cost Center in Job Info.
- **Pay Range / Comp Group Rule:** Ensure Pay Range derived correctly based on Job Code + Location grade.

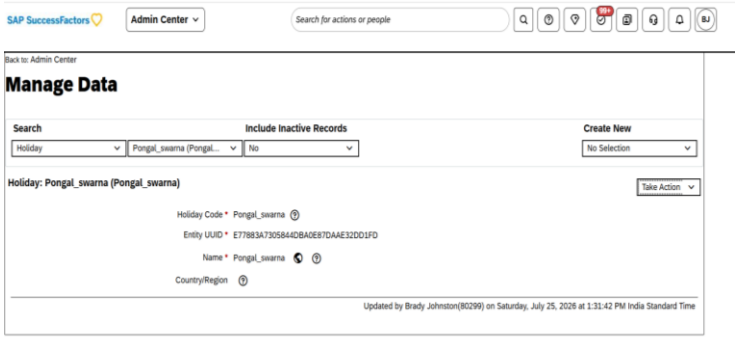

- **Status Derivation**: Confirm EMP002's status changed from Active to Terminated post-termination date.

Phase 3

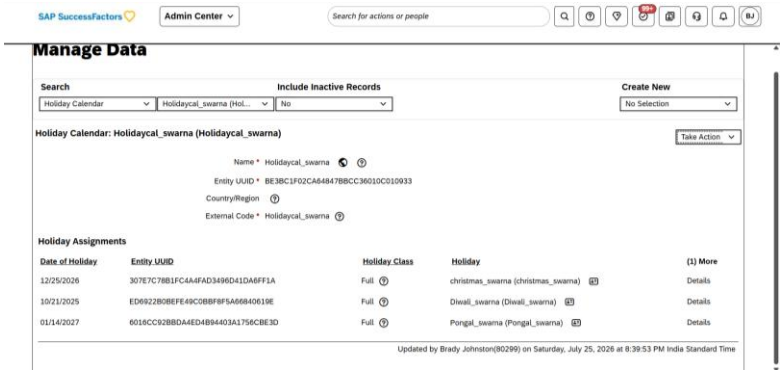

Holiday Creation

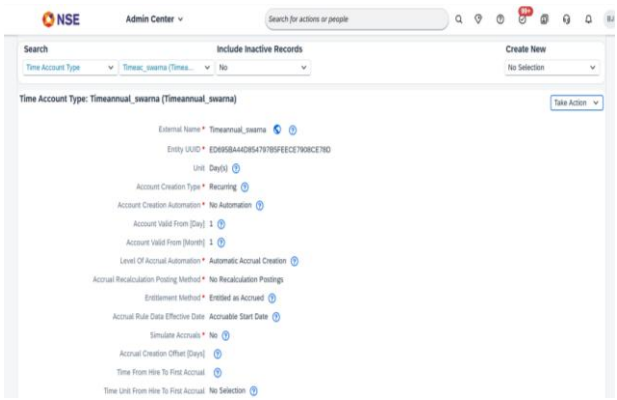

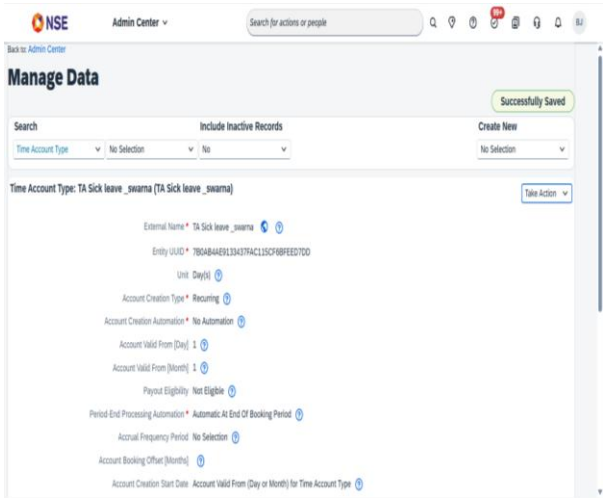

Holiday Calendar

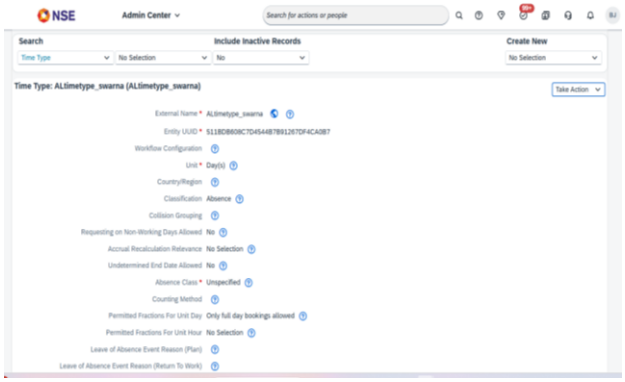

Time ac type creation -Annual Leave

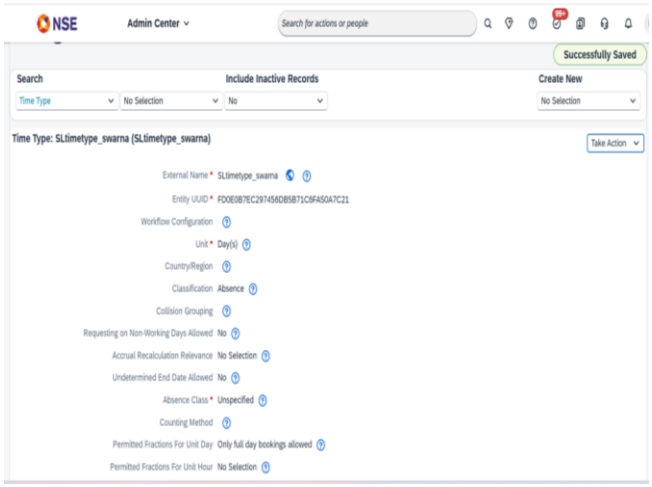

Time ac type- Sick Leave

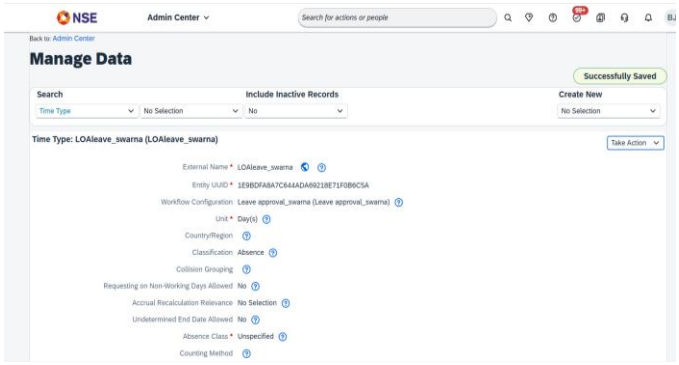

Timetype of annual leave

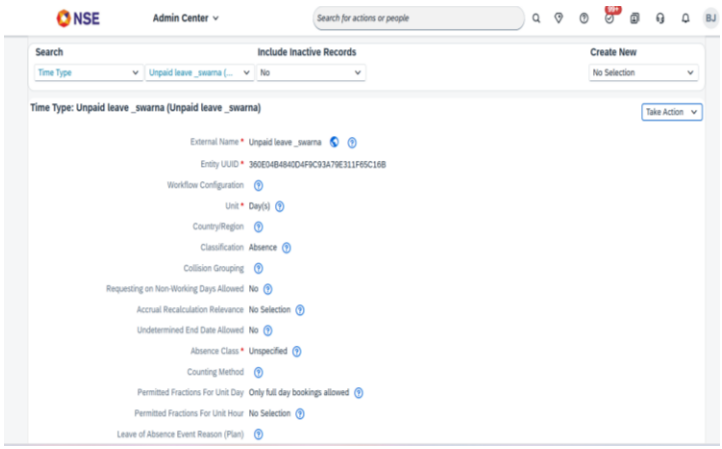

Sick Leave timetype

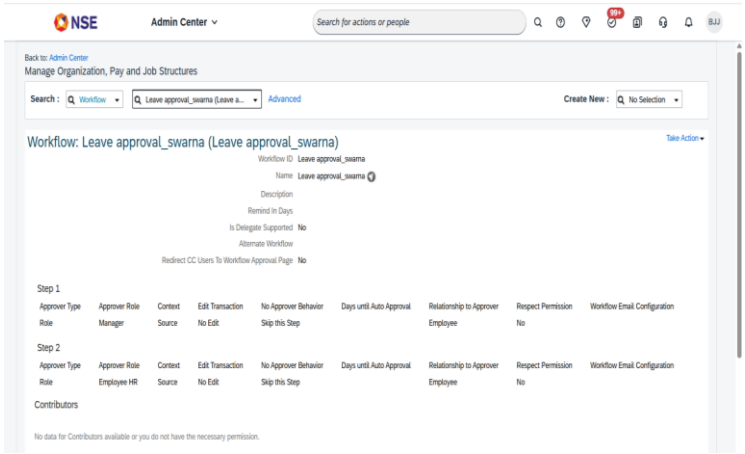

Leave of Absence Time type

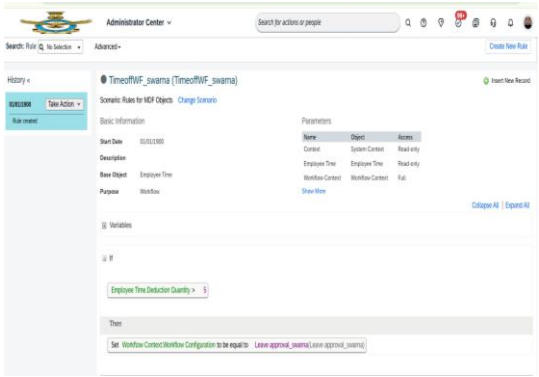

Unpaid Leave

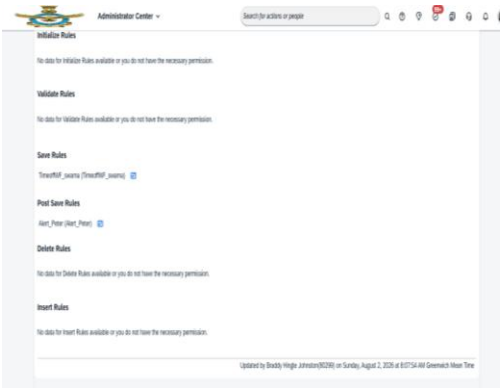

Workflow created for approval of leave created

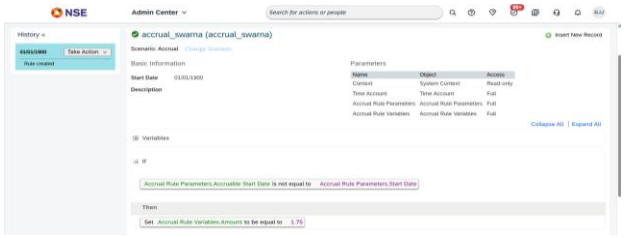

Rule for leave approval

Accrual Rule

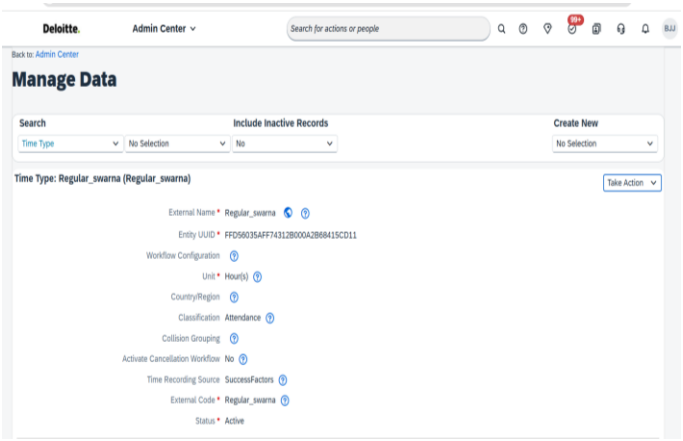

Time profile

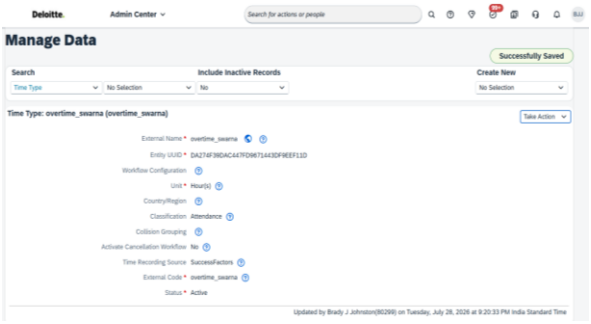

Phase 4

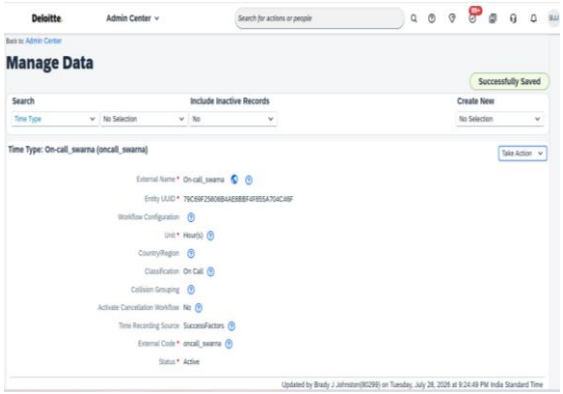

Regular Time type

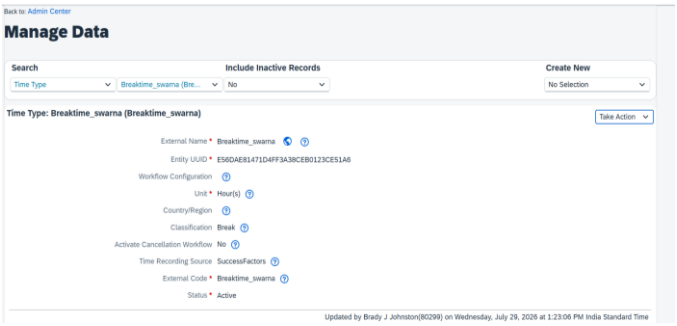

Overtime

On-Call

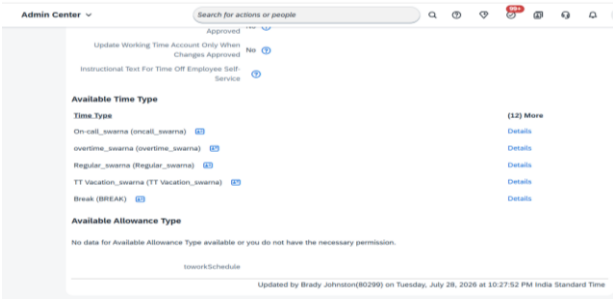

Breaktime type

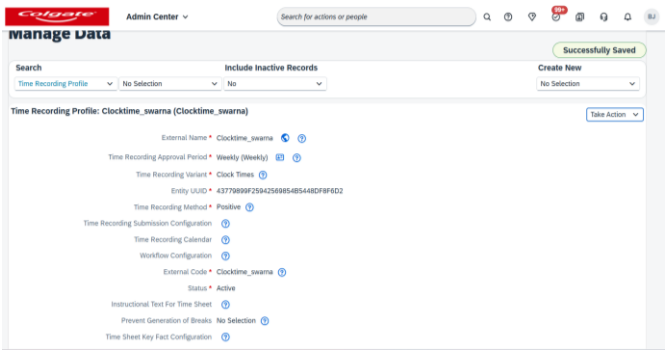

Timeprofile for regular

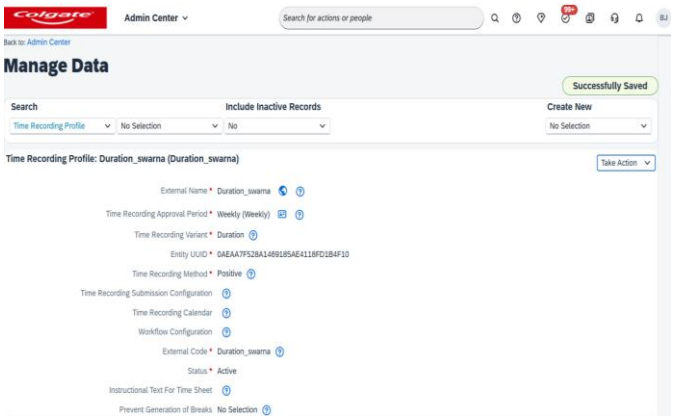

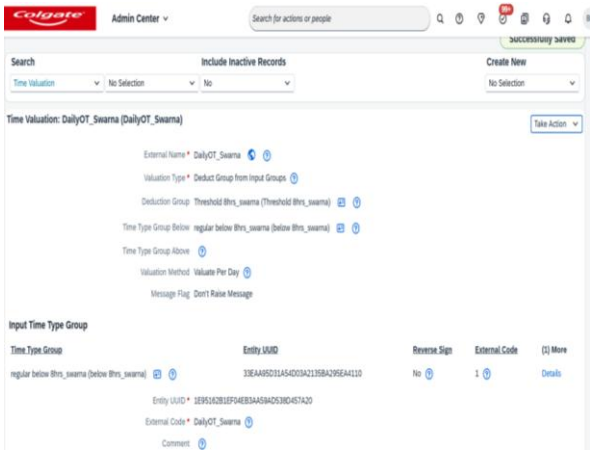

Time Recording profile of Clocktime

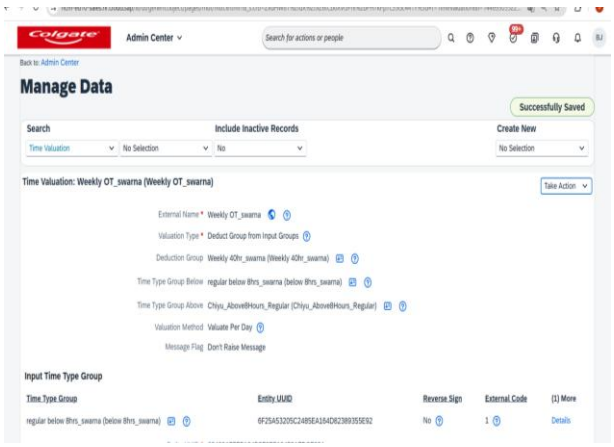

Timerecording -Duration

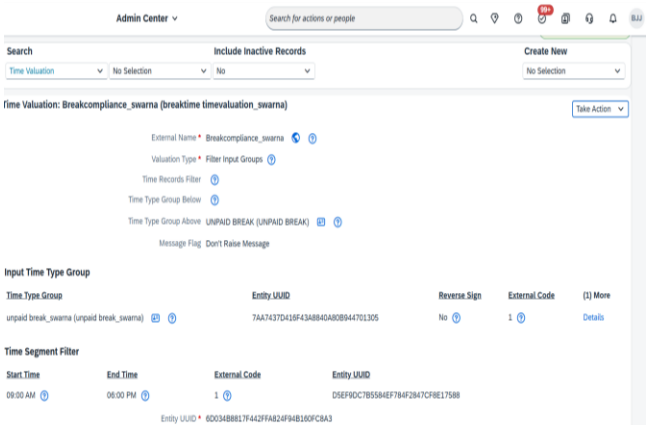

Time Valuation OT

Weekly OT

Time valuation for breakcompliance

Phase 5 steps

Step 1: Submit Leave Requests for 2–3 Test Employees

You need to record leave requests for 2 to 3 test employees (e.g., *Kate Jac*, *Test Employee 2*, *Test Employee 3*).

A. Regular Leave Request Submission

1. **Proxy as Employee 1 (Kate Jac):**
    - Go to **Employee Profile → Time Information → Go to Time Off** (or search **Request Time Off**).
    - Submit a standard leave request (e.g., 1–2 days of Vacation/Annual Leave).
2. **Trigger Escalation (Special Condition):**
    - For one of the leave requests (or Employee 2), submit a leave request that exceeds standard thresholds, triggers a specific rule condition (e.g., exceeds auto-approval limits, requesting leave during a locked period, or letting a pending request breach its SLA response time), or manually reassign/escalate it using the escalation route defined in your workflow rules.

Step 2: Manager Approvals

1. **Proxy as the Manager:**
    - Click your avatar (top right) → **Proxy As** → Search for the Manager of your test employees.
2. **Approve Both Leave Requests and Time Sheets:**
    - Go to the **Home Page**.
    - Locate the **Approve Requests** tile / **To-Do** panel.
    - Review the leave requests submitted by your test employees.

- Click **Approve** on both the absence requests and the weekly time sheet submissions.

Step 3: Record Working Time for a Full Week

1. **Proxy as each Test Employee:**
   - Go to **Employee Profile → Time Information → Go to Time Sheet**.
2. **Enter Working Hours:**
   - Record hours worked for the remaining days of the full week (e.g., 8 hours per day on non-leave days).
   - Note how the **approved leave day automatically shows up** as a locked/read-only block alongside your recorded working hours.
3. **Submit Time Sheet:**
   - Click **Submit** at the bottom right of the timesheet grid.
4. **Proxy as Manager to Approve:**
   - Proxy back as the Manager and approve the submitted weekly timesheets from the Home Page **To-Do** panel.

Step 4: Run Month-End Reconciliation

You must reconcile three key datasets to ensure data consistency across the system:

1. **Navigate to Reporting / Analytics:**
   - Go to **Reporting** (or **Story Reports** / **Table Reports** / **Manage Time Management Workbench**).
2. **Compare the Three Key Metrics:**
   - **Time Sheet Data:** Run/view total recorded working hours and timesheet records.
   - **Approved Absences:** Run/view total taken/approved leave hours.
   - **Overtime Totals:** Run/view total overtime hours calculated by the Time Valuation engine for the week/month.
3. **Verify Balance Reconciliation:**
   - Ensure that **Total Working Hours + Approved Absence Hours = Expected Planned Working Hours** for the week, and that all overtime rules generated the correct overtime totals.

Phase 6 steps

1. Headcount Report

- **Where to go:** Go to **Reporting** (or **Stories in People Analytics** / **Report Center**).
- **Steps:**
    1. Click **New** → Select **Report - Table** (or **Story**).
    2. Choose the domain: **Employee Central Core** (or *Job Information*).
    3. Include key fields: User ID, Employee Name, Department, Location, Job Title, and Employment Status (Active).
    4. Run and export the report to Excel/PDF.

2. Leave Balance Report

- **Where to go:** Go to **Reporting** or **Administer Time** / **Time Account Overview**.
- **Steps:**
    1. In **Report Center**, create a report using the domain **Time Management** (or *Time Account*).
    2. Select fields: Employee Name, Time Account Type (e.g., Vacation/Sick), Entitlement, Taken, and Remaining Balance.
    3. Run the report to show all active leave balances across your test employees.

3. Time Sheet Report

- **Where to go:** Go to **Report Center**.
- **Steps:**
    1. Create a report under **Time Management** (or *Employee Time / Time Sheet*).
    2. Select fields: Employee Name, Time Sheet Start Date/End Date, Total Recorded Hours, Approved Absence Hours, and Overtime Hours.
    3. Export the generated output showing the verified weekly/monthly totals.

One-Page Configuration Defense

1. Project Title & Executive Overview

- Project Title: End-to-End Implementation and Integration of SAP SuccessFactors Time Off, Time Tracking, and Analytics.

- Scope & Core Objectives: The objective of this configuration project was to build a unified, automated Time and Attendance ecosystem within SAP SuccessFactors. By seamlessly linking Time Off (Absence Management) directly with Time Tracking (Time Sheets) and Payroll/Reporting, the organization eliminates disjointed data silos, prevents redundant manual entry, ensures accurate overtime calculation, and maintains real-time reporting visibility for audit and balance sheet compliance.

2. Configuration Defense Topic 1: Carry-Forward Cap Strategy

- Design Decision: Implemented an automated Time Account Rule that caps annual leave carry-forward at a maximum of 5 days per employee into the next calendar year.
- Business Justification:
    - Financial Liability Management: Unused accrued leave represents an open balance sheet liability. Capping carry-forward limits the financial risk of large lump-sum payouts upon employee departure.
    - Employee Well-Being & Burnout Prevention: Forcing employees to utilize their accrued leave within the year promotes work-life balance, reduces workplace stress, and prevents burnout.
    - Operational Predictability: Encouraging timely leave usage prevents sudden end-of-year staffing shortages and allows managers to plan resource allocation predictably throughout the year.

3. Configuration Defense Topic 2: Splitting Time Recording Profiles by Employee Group

- Design Decision: Created distinct Time Recording Profiles tailored specifically to different employee groups (e.g., Hourly/Non-Exempt vs. Salaried/Exempt).
- Business Justification:
    - Salaried/Exempt Employees (Duration / Negative Time Recording): Salaried staff receive fixed pay based on standard planned working hours. They utilize Duration or Exception-Based time recording, requiring them to record only exceptions **(such as** leaves or unpaid absences). This minimizes administrative burden while maintaining accurate attendance records.
    - Hourly/Non-Exempt Employees (Positive Time Recording / Clock In-Clock Out): Hourly employees require Positive Time Recording where exact start times, end times, and break durations are logged. This allows the SAP Time Valuation engine to automatically trigger statutory compliance rules, calculate precise overtime thresholds, and track meal break adherence for legal and payroll accuracy.

4. Configuration Defense Topic 3: Time Off & Time Sheet Integration Architecture

- Design Decision: Configured Category = Absence for all vacation, annual, and sick leave time types within the primary Time Profile (Regular_TP).

- Business Justification:
  - Single-Source Data Integrity: Setting the category explicitly to Absence establishes an automatic, system-driven push from the Time Off module directly onto the weekly Time Sheet grid upon manager approval.
  - Elimination of Double Data Entry: Employees no longer need to enter an approved leave request on their time card manually. The approved absence populates automatically as a non-editable, locked block.
  - Payroll Error Reduction & Audit Security: Preventing manual re-entry on time sheets stops duplicate hours from being submitted for the same day, protecting the system against overpayment errors, unauthorized overtime claims, and compliance discrepancies during payroll reconciliation**.**
